EXPERIENCE

Mahindra Automotive, Michigan — Programmer

December 2016 - PRESENT

I build internal applications with custom distributed computing and interactive, real-time visualizations using computational fluid dynamic solvers like OpenFOAM.

Web & Moore, Remote — Security Analyst

August 2015 - August 2016

Worked remotely to manage a linux cloud environment, perform on-call incident response, and authored internal security assessment reports for the infrastructure while keeping up with the latests attack trends.

EDUCATION

Eastern Michigan University — Information Assurance

August 2013 - PRESENT

I am currently working while studying at Eastern Michigan University, studying Information Assurance & Cyber Defense.

PROJECTS

Shodanz — github.com/picatz/shodanz

Language: Ruby

A modern Ruby library to the Shodan IoT search engine, replacing the old official Ruby client on the Shodan developer website.

Packetz — github.com/picatz/packetz

Language: Crystal

Packet capturing library built with C bindings to the LibPcap library used in other tools like Wireshark, Tshark and TcpDump.

Isit — github.com/picatz/isit

Language: Go

Domain availability command-line utility with concurrent lookups.

SKILLS

Programming

Data Analysis

Interactive Visualizations

Security Mindset

DevOps Mindset

Version Control

Experiences

Conference Speaker

I've spoken at a handful of mostly local computer security conferences including Bsides Detroit, Converge, YoloCon, and A2Y. *I have pending proposals for a few next year!*

Security Competitions

I've participated in the Collegiate Cyber Defense Competition and the Information Security Talent Search several times. I've even found vulnerabilities in scoring engines for these kinds of competitions and love making my own.

PROGRAMMING LANGUAGES

Ruby

Python
